

CAREER OPPORTUNITY

Civil Design Engineer

Salary Range - £35 to 45k depending upon experience

JTS is passionately committed to making a tangible, positive contribution to a sustainable, clean environment offering our technical expertise and innovative design to create, supply and promote leading solutions in the wastewater environment.

Following an exciting start to 2023, JTS is currently seeking to appoint a Design Engineer to join our team, focusing on Wastewater Network Solutions. The role is to be based in Fleet, Hampshire, with the with flexibility of hybrid working.

We are looking to recruit an experienced Civil/Infrastructure Design Engineer with a minimum of 3 years' experience in civil engineering design in the UK water industry.

Candidates should be technically proficient, able to work with their own initiative, possess a high level of independence, and have excellent communication skills. They will undertake a design role on projects, managing and producing design output, and providing written reports to clients and senior management.

Core Duties and Responsibilities:

- Undertake detailed design work on below ground wastewater and clean water infrastructure projects for water company clients.
- Agree design philosophy / design fundamentals.
- Use Auto-CAD/ Allocate and manage CAD output.
- Be vigilant of work requirements and take personal responsibility for delivering this to agreed time, cost and quality requirements.
- Assist Project Managers to ensure the delivery of projects on time and to budget.
- Represent the company at meetings with clients, contractors and fellow professionals.
- Undertake site visits to gather information and data.
- Liaise with statutory service providers.
- Provide documentation and drawing reviews.
- Liaise with clients, design teams and contractors.

Key Skills Knowledge and Experience will include:

- Experience of wastewater network design.
- Knowledge and experience of wastewater and clean water infrastructure design, including attenuation design and flow balancing.
- Good appreciation of design delivery, health, safety and environmental processes.
- Ability to undertake multiple projects simultaneously.
- Good numerical, analytical and IT skills.
- Ability to communicate in a fluent and positive manner with other team members and to produce reports in clear English.
- Experience with AutoCAD beneficial.

Minimum Requirements:

- Engineering degree (or equivalent).
- Experience in a position where design was a major part of the role.
- Experience in the full cycle of project design delivery from inception to detailed design.

Preferred Qualifications:

- Chartered, or working towards obtaining chartership.
- Experience working within the water industry on water and/or wastewater projects.
- Knowledge of Safety in Design principles and accustomed to working to a high standard in terms of H&S compliance.

HOW TO APPLY

Please send your CV with a letter outlining why you think you would be suitable for the role.
